

# Omnilux Revive Light Therapy

What is Omnilux™ Revive Light Therapy? Omnilux Revive Light Therapy is a natural and non-invasive LED light therapy that uses a specific wavelength of pure red light. This red light penetrates deep into our skin, naturally stimulating the skin cells, promoting collagen formation, and increasing hydration.

Omnilux Revive Light Therapy creates a firmer, plumper and more hydrated complexion without any pain, side effects or downtime. Omnilux is also proven to accelerate wound and scar healing and unlike IPL or Fraxel laser treatments, Omnilux causes no residual skin damage.

## What can I expect during my Omnilux Revive Light Therapy treatment?

Protective eye shields are placed over your eyes while the Omnilux machine is moved into position. Then the Omnilux lights are turned on. The light is extremely bright but your eyes are well protected with the shields and after a few minutes you'll adjust and feel like you are lying under the sun at the beach minus any damaging UV rays..... only pure collagen and elastin stimulating red light. Omnilux treatments last 20 minutes and are entirely painless with no down-time.

## How many treatments do you need?

There is no minimum to buy and you can stop at any time. However, best results are seen with multiple treatments over time. Treatments can be once, twice or up to three times a week. Nine Omnilux treatments spaced over three weeks has been shown to give optimal results. But treatments can be weekly, biweekly, or monthly and added to your skin care regimen.

Omnilux Revive Light Therapy is also the perfect pre-event treatment – we recommend doing it a day before any special occasion to see an immediately plumper, more hydrated skin.

## What skin types/concerns will it suit?

Omnilux Revive Light Therapy is safe and can be used on any skin type or color and all complexions will benefit. As Omnilux Revive Light Therapy uses only light it is a perfect treatment for those people with skin that can be reactive to other skincare treatments and products, or for those who prefer an entirely natural but effective light treatment. Unlike IPL or Fraxel laser treatments, OMNILUX™ Revive Light Therapy causes no residual skin damage.

## Why choose Omnilux?

Unlike any other light therapy device on the market, Omnilux is based on many years of medical research and based on technology originally developed by NASA. Omnilux is used extensively by 3300 dermatologists and plastic surgeons worldwide. The efficacy and safety of Omnilux is very well documented in over 60 peer-reviewed publications and Omnilux efficacy claims are substantiated by over a decade of clinical evidence.

## What can I expect from a course Omnilux Revive Light Therapy treatments?

– The initial effects you will see are a clearer, brighter and smoother complexion. After the course of treatments you will begin to notice an improvement in skin tone, clarity and texture. Studies have shown a 74% improvement in fine lines and wrinkles and an 84% improvement in skin smoothness

and clarity.

- Reduced pore size
- Improved skin tone and texture
- Vibrant, healthier-looking skin
- Increase skin circulation and hydration
- Improved stimulate collagen formation
- Anti-inflammatory and increased healing effects
